

Almost three-quarters of global agricultural produce is contaminated by at least one kind of mycotoxin, posing a significant risk to both animal and human health.

CataLeela Nutrition is developing a nanotech-based mycotoxin elimination system that can selectively 'pick & eliminate' different mycotoxins from animal feed mixtures. This proprietary nanotech offers a safer, cheaper, recyclable approach for effective mycotoxin elimination without compromising the nutritional value of the feed, which subsequently improves long-term animal health.
